Regency Tower, Karnik Road, Kalyan (W) - 421301
9930536555 | siddharthvkutty@gmail.com

SUMMARY

Computer Science postgraduate student with hands-on internship experience in software support, ECRM testing and implementation, and web/data maintenance. Strong interest in backend systems, security-aware development, and data analysis, with project experience spanning network security tooling and blockchain systems. Seeking a Software Engineer, Backend Developer, or Software Support internship.

EXPERIENCE

Software Support Intern | Teknofit Business Solutions LLP

Feb 2026 - Aug 2026

Engineering solutions & products firm

- Supported testing and implementation of an Electronic Customer Relationship Management (ECRM) software platform, verifying functionality against business requirements prior to client rollout.
- Worked on eWorkPulse, a proprietary employee productivity monitoring software, contributing to testing and implementation efforts.
- Executed structured test cases and logged defects, working with the implementation team to reproduce issues and validate fixes.
- Assisted with configuration and user-facing setup of client-facing software during deployment to support smooth onboarding.

Software Support Intern | S.K. Solutions

Sep 2025 - Nov 2025

Integrated facility management (IFM) services provider

- Performed ongoing website maintenance, including content updates and routine checks to ensure uptime and accuracy.
- Managed and organized company data records, improving consistency and retrievability across internal systems.
- Provided first-line technical support for day-to-day software and data issues raised by internal teams.

PROJECTS

Network Intrusion Detection System (NIDS)

Python | Systems Integration | Security Engineering | GUI Development | Network Programming

- “All-in-one” monitoring tool that lowers the barrier to entry for network security.
- Wrapped complex networking libraries into a user-friendly GUI capable of visualizing, real-time monitoring, and automated incident reporting.

Permissioned Blockchain Network

Python | Flask | Cryptography (ECDSA / HMAC) | Distributed Systems | Web Development

- Built a self-contained permissioned blockchain network with a browser-based wallet and mining GUI, designed to run across multiple machines on a LAN.
- Designed a two-tier permission model separating network membership from validator (mining) admission, enforced via a dedicated Mining Certificate Authority service issuing single-use, position-bound, HMAC-signed mining certificates.
- Implemented peer-to-peer account, transaction, and block gossip so independent nodes converge on a shared ledger, alongside a lightweight tunable proof-of-work and constant block rewards.

EDUCATION

Master of Science in Computer Science (2025 - 2027)

- Somaiya Vidyavihar University

Bachelor of Science in Computer Science (2022 - 2025)

- S.I.C.E.S Degree College, Mumbai University

ADDITIONAL INFORMATION

Languages: English, Hindi

Certifications: Computer Networks and Network Security | Operating Systems: Overview, Administration, and Security | Cybersecurity Compliance Framework, Standards, and Regulations | Penetration Testing, Threat Hunting, and Cryptography
